DATE MAILED: 02/25/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/707,684	Applicant(s) CHEN ET AL.	
	Examiner Tuan Quach	Art Unit 2826	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 January 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

For convenient referencing, "et al." is omitted, e.g., Combs for Combs et al.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2826

Claims 1, 4, 5, 6, 8 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Combs.

Regarding claim 1, Combs (6,734,552) teaches (see Fig. 1, column 3 line 30 to column 4 line 32, column 6 lines 15 et seq.) a carrier 100, a chip 130 (the flipchip bonding as alternative is shown, Fig. 3, column), heat sink 110 over the chip, encapsulating material 140 filling a bonding gap between the chip and the carrier 100 and a gap between the heat sink and the chip, wherein the encapsulating material is formed in a simultaneous molding process and part of the surface 112 of the heat sink away from the chip is exposed. In addition, note that such product-by-process limitation is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and the related case cited therein which make it clear that it is the final product per se which must be determined in a "product-by-process" claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product-by-process" claims or not. As stated in *Thorpe*,

Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA, 1972); *In re Pilkington*, 411 F.2d 1345, 1348, 162 USPQ 145, 147(CCPA 1969).

The Patent Office bears a lesser burden of proof in making out a case of prima facie obviousness for product-by-process claims because of their peculiar nature" than when a product is claimed in the conventional fashion. *In re Fessmann*, 489 F.2d 742, 744, 180 USPQ 324, 326 (CCPA 1974). Once the examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art,

Art Unit: 2826

although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. *In re Marosi*, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983)

"[T]he lack of physical description in a product-by-process claim makes determination of the patentability of the claim more difficult, since in spite of the fact that the claim may recite only process limitations, it is the patentability of the product claimed and not of the recited process steps which must be established. We are therefore of the opinion that when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claimed in a product-by-process claim, a rejection based alternatively on either section 102 or section 103 of the statute is eminently fair and acceptable. As a practical matter, the Patent Office is not equipped to manufacture products by the myriad of processes put before it and then obtain prior art products and make physical comparisons therewith." *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972).

Regarding claim 4, the use of encapsulating material of resin is shown, column 56 line 19, e.g., an epoxy based material. Regarding claim 5, the heat sink comprising a metal is shown, column 5, lines 25-30. Regarding claim 6, the solder balls attached away from the carrier 100 correspond to structures 106.

Claims 2, 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Combs.

Regarding claim 2, it would have been obvious to one skilled in the art to have selected and optimized the distance between the heat sink and the chip.

Art Unit: 2826

Regarding claim 3, it would have been obvious to have selected and optimized the thermal conductivity of the encapsulating material, including those as claimed wherein thermal conductivity can be improved. Official notice is additionally given regarding the selection of conventional encapsulating materials having thermal conductivity greater than the claimed value.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Combs taken with Call.

The reference applied above does not recite the passive component.

Call (5,471,027) teaches the use of additional passive components, e.g., 28. See column 4 lines 39-48.

It would have been obvious to have included such passive components as taught by Call since such incorporation is conventional and permits the incorporation of additional electronic devices in addition to the semiconductor chips as taught by Call.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Combs taken with Huang.

Combs as applied above does not recite the alternative of lead frame in claim 8.

Huang 6,844,622 teaches, Fig. 5, the use of lead frame 50 as chip carrier for chip 51. See column 7 line 30-35.

It would have been obvious to one skilled in the art in practicing the above invention to have employed the lead frame as chip carrier for chip 51 since such corresponds to an obvious alternative employing the lead frame as evidenced by Huang.

Claims 9-18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Combs taken with Yang.

Combs is applied as above and does not recite the chip set comprising a plurality of chips as in claim 9, the second chip and first chip as in claim 12, the first chip, second chip, and third chip as in claim 14.

Yang 2003/0141582 shows stacked type flip chip package including flip chip of the second chip on the first chip. See Figs. 2 and 5 wherein the active surface of the first chip can join the board and wherein the active surface of the second chip joined to the first chip in a flip chip fashion, e.g., chip 130 joined to chip 120. The provision of three chips joined in such fashion is also shown in Fig. 5 wherein chip 320 having active surface joined to the substrate board 310, the second chip 330 joined to first chip with active surface way, and the third chip 390 joined to the second chip in a flip chip fashion. The appropriate wire connections are also shown, e.g., 160, See [0019]-[0025].

It would have been conventional and obvious in practicing the above invention to have included the chip set comprising two chips or three chips as taught by Yang, including the respective surfaces being joined in the manner delineated above since such multichip is conventional and advantageous as taught by Yang permitting the formation of stack type flip chip package.

Regarding claim 10, it would have been obvious to one skilled in the art to have selected and optimized the distance between the heat sink and the chip.

Art Unit: 2826

Regarding claim 11, it would have been obvious to have selected and optimized the thermal conductivity of the encapsulating material, including those as claimed wherein thermal conductivity can be improved. Official notice is additionally given regarding the selection of conventional encapsulating materials having thermal conductivity greater than the claimed value.

Regarding claims 13 and 15, the provision of appropriate conductive wires would have been conventional and obvious as shown above in Yang.

The provision of the heat sink comprising metal in claim 17 is taught in Combs delineated above. Regarding claim 18, the provision of solder balls corresponds to structure 106 well known as shown in Combs above.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Combs taken with Yang as applied to claims 9-18 and 20 above, and further in view of Call.

The incorporation of the passive component would have been obvious for the same reason delineated above regarding claim 7 in view of Call.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Comnbs taken with Yang as applied to claims 9-18 and 20 above, and further in view of Huang.

The alternative of using lead frame in this claim would have been obvious for the same reason applied to claim 8 above in view of the teachings of Huang as delineated above.

Claims 9, 12, 13, 16, 18, 20 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Pu.

Regarding claim 9, Pu 6,610,560 teaches chip package structure comprising chip including first chip 210 bonded to second chip 210 in a flip chip bonding process creating a bonding gap a heat sink 290 over the chip set, encapsulating material 270 filling the flip chip bonding gap and the chip set and the heat sink. See Fig. 2D, column 3 line 59 to column 5 line 20. The simultaneous bonding corresponds to a product-by-process feature and the rationale discussed above regarding claims 1, 4, 5, 6, 8 over Combs is applicable and incorporated by reference.

Regarding claim 12, the provision of first active surface joined with the active surface of the second chip is shown in Fig. 2A. Regarding claim 13, the wires are shown, e.g., 211. Regarding claim 16, the resin is shown, column 4 line 46.

Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pu.

Regarding claim 10, it would have been obvious to one skilled in the art to have selected and optimized the distance between the heat sink and the chip.

Regarding claim 11, it would have been obvious to have selected and optimized the thermal conductivity of the encapsulating material, including those as claimed wherein thermal conductivity can be improved. Official notice is additionally given regarding the selection of conventional encapsulating materials having thermal conductivity greater than the claimed value

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pu taken with Combs.

The use of heat sink including metal is well known in the art as taught by Combs delineated above and as such would have been obvious.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pu taken with Call.

The incorporation of a passive component in this claim would have been obvious for the same reason delineated regarding Call as applied above.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pu taken with Huang.

The alternative of lead frame carrier in this claim would have been obvious for the same reason as taught by Huang above for the reasons delineated above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Quach whose telephone number is (571) 272-1717. The examiner can normally be reached on M - F from 8:30 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1562.
